

Fleet management reimagined: access instead of ownership.

Leave container logistics to the experts and focus fully on your core business. **With intelligent IBC pooling from Liquid Concept, you no longer need to buy, maintain and manage a container fleet of your own.**

We provide exactly the capacity you need, when you need it – and take care of everything else.

Your digital control centre
All real-time sensor data, documents and fleet management in one central portal. Including an API for seamless ERP integration, 100% GDPR-compliant.

LCloud

Unique on the market: the genuine trip lease model

Liquid Concept is the only provider of so-called **'trip leases'.** For you, this means: we not only provide flawless IBCs ready for filling, but also handle all transport and monitor each trip through to the consignee. If required, we even settle idle time and residual-quantity costs. Once the transport is complete, the container goes off-hire, immediately easing your cost structure.

Your logistics: scalable, secure and transparent.

Economics

Maximum financial freedom (pay-per-use)

No valuable capital tied up in a container fleet of your own (zero CAPEX).

- **Cost control:** You only pay for the IBCs you actually use.
- **Instant scalability:** Respond rapidly to seasonal order peaks or special projects – without long-term investment or long lead times for procuring new containers.

Operational reliability

Full service, zero worries

We take the entire administrative and operational workload off your hands.

- **Constant availability:** Thanks to our extensive network, IBCs are available at short notice wherever they are needed.
- **Food safety guaranteed:** All pooling containers are subject to the strictest quality controls. We handle repairs, certified cleaning and all official inspections (e.g. DGUV3). Cross-contamination is ruled out.

Digital control

Transparency across your entire fleet

Fleet management works best when it is data-driven. Our smart data loggers let you (and us) see where the IBCs are at any time via our portal **LC Cloud**.

- **Faster turnaround:** Global GPS tracking enables optimum scheduling, reduces idle time and prevents container losses.
- **Complete documentation:** All relevant process values flow seamlessly into **LC Cloud** – for maximum compliance and efficiency.

Share & Reuse

Ready for the circular economy

Achieve your ESG targets and meet upcoming EU packaging requirements along the way.

- **Reduced carbon footprint:** Optimised transport routes and avoiding empty runs measurably reduce environmental impact.
- **Zero waste:** We professionally repair damaged containers or recycle them 100% at the end of their long service life.

Ready for the logistics of the future?
